## imagePad4e(f,r,c,padtype)

- Write a function **`g=imagePad4e(f,r,c,padtype)`**, for padding image, ***f***, With ***r*** rows above and below the image, and ***c*** columns to the left and right. If ***padtype***=***'zeros'***, or is omitted from the argument, the function should implement zero padding. If ***padtype***=***'replicate'***, replicate padding.

## What should be uploaded?

- Main script that call and execute the function
- m file (commented);
- Examples of images showing two padtypes;
- Report.
